

Lithionics Battery

How Do I Use the NeverDie?

The following applies to the NeverDie pushbutton based system only.

To enable NeverDie output, perform the following:

1. Locate the NeverDie button.
2. Push and hold the NeverDie button for approximately 1 second. You will hear an audible “click” or “thump” from the battery indicating the NeverDie has been actuated.

Once this has been performed the NeverDie system will be activated and the battery will be “on”. This can be confirmed by checking output voltage on the battery’s terminal connections or by connecting it to its intended application.

To disable NeverDie output, perform the following:

1. Locate the NeverDie button.
2. Push and hold the NeverDie button for approximately 3 seconds. You will hear an audible “click” or “thump” from the battery indicating the NeverDie has been actuated.

The NeverDie system is now disabled and the battery is “off”.

The following applies to the NeverDie wireless based system only

To enable NeverDie output, perform the following:

1. Locate the NeverDie Key FOB.
2. Push and hold the NeverDie Key FOB’s unlock symbol button for approximately 1 second. You will hear an audible “click” or “thump” from the battery indicating the NeverDie has been actuated.

Once this has been performed the NeverDie system will be activated and the battery will be “on”. This can be confirmed by checking output voltage on the battery’s terminal connections or by connecting it to its intended application.

To disable NeverDie output, perform the following:

1. Locate the NeverDie Key FOB.
2. Push and hold the NeverDie Key FOB’s lock symbol button for approximately 1 second. You will hear an audible “click” or “thump” from the battery indicating the NeverDie has been actuated.

The NeverDie system is now disabled and the battery is “off”.
